Q.No.1

1) Value of education in technical & other professional institution.

The subject that enables us to understand what is valuable for human happiness is called value education. The present education system has become largely skill-based. The prime emphasis is on science & technology. However, science & technology can only help to provide the competence of deciding what to provide the means to achieve what is considered valuable. It is not within the scope of science & technology to provide the competence of deciding what really is valuable. Value education is a crucial missing link in the present education system. Because of this deficiency, most of our effort may prove to be counterproductive & serious crises at the individual, societal & environmental level are manifesting.
